

Collins Enebeli

Frontend Developer

I'm a frontend software developer, passionate about solving problems with code and transforming ideas from pixels to scalable products. I create usable applications with user experience as a top priority using various web tools, languages and technology.

WORK EXPERIENCE

Cakertools — Frontend Engineer

MAY 2021 - PRESENT

I'm currently building smart solutions on the decentralised web with the team at Cakertools labs.

- Crafted a component library from scratch using SCSS Modules to ensure consistency.
- Used Next Js to deliver optimised, pre-rendered pages when necessary.
- Engineered state management with Redux and Hooks.
- Pulled data from the blockchain in real time to display live statistics and token prices.
- Visualized blockchain data using charting libraries and custom paginated tables.
- Maintained a well structured codebase and used Typescript to improve predictability.
- Integrated seamless blockchain wallet connection with support for about six different wallet providers.
- Implemented api request caching on the server to save resources, improve performance and generally reduce load on the backend.

Playarone — Frontend Developer [Contract]

SEPTEMBER 2020 - OCTOBER 2021

I joined the Playarone engineering team to build an e-sports gaming platform.

- Built complex layouts and components with React & SASS.
- Managed app state with react hooks.
- Worked closely with a senior engineer to implement app features with a postgres database, typescript and the MVC pattern.

Charisol — Frontend Developer [Contract]

OCT 2020 - MARCH 2021

I worked with the charisol product team on a contract basis to build a web application for a fintech startup.

- Transformed figma prototypes for a fintech application to a functional UI using react js combined with context api for state management and sass for styling.
- Made use of tools like Notion and Usepastel for task management and team feedback.
- Interacted with GraphQL apis from the client side using Apollo GraphQL.

HNG Internships — Frontend Developer [Intern]

MAY 2020 - AUGUST 2020

I contributed to developing user interfaces for quite a number of products within three months.

- Worked with node.js developers to build a certificate generator.
- Lead the frontend department of my team to deliver responsive web templates to be sold on Envato market.
- Built an open source micro API project alongside python (Django) developers using Jinja template engine on the frontend.

PROJECTS
